

ABSTRACT OF THE DISCLOSURE

A pet transporter for a bicycle includes a housing having a top wall,
5 a bottom wall and a peripheral wall. At least one door is positioned in the
peripheral wall. A wheel assembly includes a pair of axles each having a
pair of wheels attached thereto. A coupler assembly releasably couples the
wheel assembly to the bottom wall of the housing. An elongated member
has a first end a second end. A pivot member releasably couples the first
10 end to a front wall of the housing such that the first end is pivotally
coupled to the housing. A securing member is attached to the second end
of the elongated member for releasably coupling the second end to a
bicycle chair mount.
